

Date	Program (dms, capi)	Teen ID#	Description of Problem	Resolution
1/27/08	24-mo CAPI and DMS	G10116	The 24-mo interview was logged as "completed" in the DMS, but is missing from the CAPI dataset. This particular interviewer had problems with the CAPI system; the data cannot be retrieved. Teen completed the protocol without getting pregnant.	This interview was accounted for when determining the point of last contact for this teen (using DMS data).
7/15/08	24-mo CAPI and DMS	G10769	The 24-mo interview was logged as "completed" in the DMS, but is missing from the CAPI dataset. This particular interviewer had problems with the CAPI system; the data cannot be retrieved. Teen completed the protocol without getting pregnant.	Factor in this interview when determining the point of last contact for this teen (using DMS data).
9/15/08	24-mo and 12-mo CAPI and DMS	G11098	The interviewer mistakenly conducted a 12mo CAPI with this teen, at the 24mo timepoint. This particular interviewer had problems with the CAPI system. Teen had already gotten pregnant again at about 3moPP, and originally skipped the 12mo CAPI.	Her 12mo CAPI should be used as the 24mo timepoint in the analysis. The date of the CAPI will reveal her "12mo" CAPI actually followed the 18mo. The analyst should keep in mind she had already become pregnant again at 3mo PP.
